Professional Summary

Sixteen years leading product and design on data-heavy enterprise software, the last six on AI and LLM products. I own product definition, roadmap and end-to-end UX, and ship the front-end I design in HTML, CSS and JavaScript.

Highlights

- Cut campaign planning from **two weeks to three hours** for the UK's largest out-of-home advertising agency; platform bookings rose from under 5% to **100% of UK bookings** (client's public record).
- Made AI deal screening **60% faster** for a private-equity firm and cut technical due diligence from **three weeks to four days** for VC and PE investors, by designing AI tools whose every answer carries its source.
- Moved PTC University from perpetual licences to subscription, **0% to 64%** of new bookings in five quarters, and removed **$1M a year** in print costs.

Professional Experience

Product & Design Lead · Sahaj AI (employer title: Solution Consultant)

Dec 2019 – Present

Product and design owner embedded in client AI teams: product definition, roadmap and end-to-end UX for B2B enterprise AI platforms in advertising technology, private equity, venture capital and HR software. Five years on one connected platform for one client; I ship the front-end I design.

- Led product and design for **Talon Outdoor**, the UK's largest out-of-home advertising agency (£400M revenue), across six connected systems for trading, audience data, creative, reporting, inventory and booking, under one **design system** I introduced. Platform bookings rose from under 5% to **100% of UK bookings** on the client's public record.
- Cut campaign planning from **two weeks to three hours** and added **£69,000** of media value per client, measured against trader baselines, by turning AI recommendations into editable campaign plans with KPIs attached.
- Made private-equity deal screening **60% faster**, measured before and after rollout, by designing an AI screening tool that cites a source behind every score and says so when evidence is thin, so analysts stopped re-checking it by hand.
- Cut technical due diligence from **three weeks to four days**, measured across VC and PE engagements, by designing an AI review tool that turns **16 analysis dimensions** into confidence-rated findings, none reaching a partner without a source.
- Designed **OrgOS**, an internal platform of eight modules that lets **200 people** (250 today) run staffing, pay and ownership in the open with no management layer; zero managers in the loop since launch. Also shipped **PlanIt**, a consumer crowding app, from zero to launch in six months (1,000 monthly visitors, 250 active users).

Product & Design Lead · PTC Inc., PTC University

Mar 2014 – Dec 2019

First design hire at PTC University India and its product owner in practice: product definition, the quarterly release roadmap (2016–2019), portfolio consolidation and sunsets. Built and led the **4-person** distributed customer-experience team.

- Consolidated five learning platforms into one, migrating **150k learners** in 24 months; **550k+** registered learners in 20+ countries, with NASA, Boeing, Toyota, Airbus and Apple among the customers.
- Moved the business from perpetual licences to subscription, **0% to 64%** of new bookings in five quarters (Q3 2017 to Q3 2018), by designing a free-to-premium funnel where free tutorials converted learners to paid plans.
- Removed **$1M a year** in print costs, measured against the 2016 print budget, by replacing printed guidebooks with responsive digital content; mobile grew from 4% of sessions into a real channel and locales went from 9 to 11.

Designer and Front-End Developer · Equal Experts, for Telefónica O2 UK

Dec 2012 – Mar 2014

- Co-designed and hand-coded the front-end of reward and offer screens for **4M+** MyO2 users: 2.6M Priority Moments sign-ups in year one and a 5-star App Store rating (O2's public launch figures; I joined the programme in 2013). Made the legacy MyO2 app responsive across iOS, Android, Windows Phone and web.

Systems Analyst, Mobility · Tata Consultancy Services

Sep 2010 – Dec 2012

Mobile products for Fortune 500 banking and pharmaceutical clients.

Skills

Product design — UX design, interaction design, visual design, design systems, information architecture, user research, usability testing, journey mapping, service blueprints, prototyping, accessibility (WCAG 2.1 AA), Lean UX, data visualisation, Figma

AI product design — LLM and agentic product UX, human-in-the-loop workflows, explainability and confidence display, AI failure states, provenance and citations, prompt and evaluation design, AI agent governance and oversight

Product management — product strategy, product definition, roadmapping, requirements (PRDs), prioritisation, stakeholder management, cross-functional leadership, agile delivery, A/B testing, product analytics, product-led growth, B2B SaaS, enterprise software

Engineering & domains — HTML5, CSS3, JavaScript shipped to production, design systems as installable Claude plugins, automated quality gates in CI, Claude, Antigravity; advertising technology, private equity, venture capital, banking, pharma, EdTech, telecom, HR software
