Indore, India · remote · GMT+5:30 · overlap with both US coasts · 4 weeks' notice

“Your model is right. Your users still won’t bet on it.”

I design that half-second of doubt — human-in-the-loop design between people and AI. Sixteen years owning product and design on complex, data-heavy products; the last six on AI and LLM products where a professional’s money, reputation, or workflow rides on the output. Shipped to 4M+ users. Author of an eight-pattern design library for trustworthy AI — all of it in production.

Experience

Product & Design Lead — AI Products · Sahaj AI

Dec 2019 – Present

Embedded product & design owner inside client AI teams — five years on one connected platform of applications, not project-hopping · product definition, roadmap, and end-to-end design of B2B enterprise AI platforms (AdTech, FinTech, PE, HRTech) · the interface I design is the front-end I ship in the PR

- Turned the UK’s largest OOH agency (£400M revenue) into the market’s **aggregator** — a DSP with its own demand and supply sides — by owning product and design across six connected systems: automated trading, audience intelligence on billions of data points, programmatic buying, creative management, proof-of-play reporting, free inventory software that pulled media owners’ supply in, and white-label mobile-web booking for franchisors; unified under one design system I introduced. Client’s public record: platform bookings went from under 5% to **100% of UK bookings**.
- Cut campaign planning **2 wks → 3 hrs** and added **£69,000** media value per client, measured against trader baselines, by turning AI output into customizable campaign plans with KPIs attached — five years, one platform.
- Shipped **PlanIt** 0→1 in six months, measured by zero usability complaints and no tutorial shipped, by designing for anxious travellers rather than commuters — a 1–10 quietness score, a British voice, and a mascot whose error screen users triggered on purpose; 1,000 monthly visitors, 250 active.
- Made PE deal screening **60% faster**, measured pre- vs post-rollout, by designing an **agentic** AI platform with an auditable oversight loop — a cited source behind every score, honest abstention on thin data — so analysts stopped re-verifying the machine.
- Compressed technical due diligence **3 wks → 4 days**, measured across VC + PE engagements, by designing the governance gate for an AI reviewer — 16 analysis dimensions distilled to confidence-backed signals; no verdict reaches a partner uncited.
- Replaced a management layer for 200 people (250 today), measured by zero managers in the loop since launch, by designing **OrgOS** — eight modules on one object model: one mental model where staffing, pay, and ownership are configured, governed, and monitored in the open.

Product & Design Lead · PTC Inc. · PTC University

Mar 2014 – Dec 2019

First design hire at PTC University India – and its product owner in practice: product definition, the quarterly release roadmap (2016–2019), portfolio consolidation and sunsets; built and led the 4-person distributed CX team

- Consolidated five learning platforms into one, migrating **150k active learners in 24 months** — defined the product and drove the sunsets, leadership ratifying — **550k+ registered** across 20+ countries; NASA, Boeing, Toyota, Airbus and Apple among the clientele.
- Drove a product-led shift from perpetual licenses to subscription, measured at **0% → 64% of new bookings** in five quarters (Q3 2017 → Q3 2018), by designing the free-to-premium funnel — free tutorials and trainings whose experience converted learners to paid subscriptions.
- Eliminated **\$1M / yr** in print costs, measured against the 2016 print budget, by replacing printed guidebooks with digital-first content — made responsive — mobile grew from 4% of sessions into a real channel; locales 9 → 11.

Designer + Front-End Developer · Equal Experts · for Telefónica O2 UK

Dec 2012 – Mar 2014

- Shipped reward and offer screens to **4M+ MyO2 users**, measured by 2.6M Priority Moments sign-ups in year one and a 5-star App Store rating, by co-designing every screen and hand-coding all the front-end myself — including making the legacy MyO2 responsive across iOS, Android, Windows Phone, and web. (Launch figures are O2's public numbers; I joined the programme in 2013.)

Systems Analyst — Mobility · Tata Consultancy Services · mobile for Fortune 500

Sep 2010 – Dec 2012

banking & pharmaceutical clients

Skills & tools

AI product design — agent governance & oversight UX, LLM & agentic interfaces, confidence & explainability, AI failure states, provenance & citations, prompt & eval design, evaluation-aware design, latency & cost trade-offs

Product & systems — systems thinking, product-led growth (free-to-premium), product definition, roadmapping, requirements (PRDs, backlog-native), journey maps & service blueprints, 0→1 and 1→n, enterprise SaaS, information architecture, user research, usability testing, A/B testing, product instrumentation & analytics, accessibility (WCAG)

Design foundations — Lean UX, user experience design, interaction design, visual design, logo & mascot design, colour theory

Craft & tools — AI-assisted prototyping in working code (HTML/CSS/JS to production), design systems encoded as installable Claude plugins (two across client orgs, one public), automated quality gates in CI (contrast, overflow, legibility), Figma, Claude, Antigravity, data visualization

Domains — AdTech, programmatic, FinTech & PE, venture capital, banking, pharma, EdTech & LMS, telecom, HR software, loyalty & retention

Education

Executive MBA, Business Analytics · Institute of Management Technology, Ghaziabad · 2017–2018

B.E., Electronics & Communication · Shri Vaishnav Institute of Technology and Science, Indore · 2006–2010
