Indore, India · Remote (GMT+5:30, daily overlap with both US coasts) · Available on 4 weeks' notice

Summary

Product and design lead with sixteen years on complex, data-heavy enterprise software, the last six on AI and LLM products. I own product definition, the roadmap and end-to-end UX design, and I ship the front-end I design in HTML, CSS and JavaScript. Led product and design across six connected systems for the UK's largest out-of-home agency, where campaign planning fell from two weeks to three hours. Author of a production system for human-in-the-loop AI design: one rule (Act / Review / Ignore) and eight patterns covering confidence, explainability, failure states, provenance and citations, calibration and reversibility.

Core skills — Product design · UX design · Interaction design · Design systems · Design leadership · User research · Usability testing · Information architecture · Service blueprints · Accessibility (WCAG 2.1 AA) · Figma · HTML5 · CSS3 · JavaScript · AI and LLM product design · Agentic UX · Human-in-the-loop · Explainability · Product strategy · Roadmapping · B2B SaaS · Enterprise software · Agile delivery

Experience

Product & Design Lead · Sahaj AI (employer title: Solution Consultant)

Dec 2019 – Present

Embedded product and design owner inside client AI teams: product definition, roadmap and end-to-end design of B2B enterprise AI platforms in AdTech, FinTech, private equity and HR software. Five years on one connected platform for one client; the interface I design is the front-end I ship.

- Led product and design for **Talon Outdoor**, the UK's largest out-of-home agency (£400M revenue), across six connected systems: trading, audience intelligence, creative management, proof-of-play reporting, inventory software and white-label booking. On the client's public record, platform bookings rose from under 5% to **100% of UK bookings**.
- Cut campaign planning from **two weeks to three hours** and added **£69,000** of media value per client, measured against trader baselines, by turning AI recommendations into editable campaign plans with KPIs attached.
- Introduced one **design system** across all six Talon systems, then encoded it as installable Claude plugins used by developers at Talon and Sahaj.
- Made private-equity deal screening **60% faster**, measured before and after rollout, by designing an agentic AI platform with a human oversight loop: a cited source behind every score, and abstention when evidence is thin.
- Cut technical due diligence from **three weeks to four days**, measured across VC and PE engagements, by designing the governance gate for an AI reviewer: **16 analysis dimensions** distilled into confidence-backed signals, with no uncited verdict reaching a partner.
- Designed **OrgOS**, eight modules on one object model, so **200 people** (250 today) run staffing, pay and ownership in the open with no management layer; zero managers in the loop since launch.
- Shipped **PlanIt**, a consumer crowding app, from zero to launch in six months: 1,000 monthly visitors and 250 active users.

Product & Design Lead · PTC Inc., PTC University

Mar 2014 – Dec 2019

First design hire at PTC University India and its product owner in practice: product definition, the quarterly release roadmap (2016–2019), portfolio consolidation and sunsets. Built and led the **4-person** distributed CX team.

- Consolidated five learning platforms into one, migrating **150k learners** in 24 months; **550k+** registered learners across 20+ countries, with NASA, Boeing, Toyota, Airbus and Apple among the clientele.
- Drove the shift from perpetual licences to subscription, from **0% to 64%** of new bookings in five quarters (Q3 2017 to Q3 2018), by designing a free-to-premium funnel of free tutorials that converted learners to paid plans.
- Eliminated **$1M a year** in print costs, measured against the 2016 print budget, by replacing printed guidebooks with responsive digital-first content; mobile grew from 4% of sessions into a real channel and locales went from 9 to 11.

Designer and Front-End Developer · Equal Experts, for Telefónica O2 UK

Dec 2012 – Mar 2014

- Co-designed and hand-coded the front-end of reward and offer screens for **4M+** MyO2 users: 2.6M Priority Moments sign-ups in year one and a 5-star App Store rating (O2's public launch figures; I joined the programme in 2013). Made the legacy MyO2 responsive across iOS, Android, Windows Phone and web.

Systems Analyst, Mobility · Tata Consultancy Services

Sep 2010 – Dec 2012

Mobile products for Fortune 500 banking and pharmaceutical clients.

Skills & tools

AI product design — AI agent governance and oversight UX, LLM and agentic interfaces, human-in-the-loop workflows, confidence and explainability, AI failure states, provenance and citations, prompt and eval design, evaluation-aware design, latency and cost trade-offs

Product & systems — product strategy, product definition and roadmapping, requirements (PRDs, backlog-native), prioritisation, stakeholder management, product-led growth (free-to-premium funnels), systems thinking, zero-to-one and scale-up, enterprise B2B SaaS, information architecture, journey mapping and service blueprints, user research and usability testing, A/B testing, product instrumentation and analytics, accessibility (WCAG 2.1 AA)

Design foundations — Lean UX, user experience design, interaction design, visual design, design systems, logo and mascot design, colour theory, data visualisation

Craft & tools — HTML5, CSS3 and JavaScript shipped to production, AI-assisted prototyping in working code, design systems encoded as installable Claude plugins (two across client organisations, one public), automated quality gates in CI (contrast, overflow, legibility), Figma, Claude, Antigravity

Domains — AdTech and programmatic advertising, FinTech and private equity, venture capital, banking, pharma, EdTech and learning management, telecom, HR software, loyalty and retention

Education

Executive MBA, Business Analytics · Institute of Management Technology, Ghaziabad · 2017–2018
B.E., Electronics & Communication · Shri Vaishnav Institute of Technology and Science, Indore · 2006–2010
