

Arpit Maheshwari

Product & Design Leader · AI & Data-Intensive Products

maheshwari.arpit88@gmail.com · +91 8983092531 · arpitmaheshwari.com

Indore, India · remote · GMT+5:30 · 4–5 hrs US-East overlap · 4 weeks' notice

“Your model is right. Your users still won’t bet on it.”

I design that half-second of doubt — the trust layer between people and AI. Fifteen years owning product and design on complex, data-heavy products; the last six on AI and LLM products where a professional’s money, reputation, or workflow rides on the output. Shipped to 4M+ users. Author of an eight-pattern design library for trustworthy AI — all of it in production.

Selected results

2 wks → 3 hrs campaign planning — programmatic platform processing 50M bids/hour (AdTech)

60% faster deal screening — LLM private-equity platform, a cited source behind every score (FinTech)

3 wks → 4 days technical due-diligence cycles for VC + PE investors

\$1M / yr · 0→64% print savings · subscription share of new bookings — PTC University (EdTech)

Experience

Product & Design Lead — AI Products · Sahaj AI · Solution Consultant

Dec 2019 – Present

Product & design lead at a technology consultancy — owning product definition, roadmap, and design of AI products for AdTech, FinTech, Private Equity, and HRTech clients · embedded in distributed agile teams of engineers and data scientists

- Owned product definition, roadmap, and design of a \$300M media business’s programmatic out-of-home ad platform — **five years on one product**. Planning: **2 wks → 3 hrs**; +£69,000 media value per client.
- Found a second product in data the client already owned: **PlanIt** turned billboard footfall signals into a consumer crowding app — shipped in six months, with an unsure mascot in place of a guess.
- Defined and designed an **agentic** LLM deal-screening platform for private equity — every claim cited, honest abstention when sources are thin. Screening **60% faster**, because analysts stopped re-verifying the machine.
- Defined and designed a technical due-diligence platform (VC + PE) — an LLM reads code and documents, four signal classes scored, no verdict ships without a cited source. Cycles: **3 weeks → 4 days**.
- Designed the software that does a manager’s job: **OrgOS** decides staffing, pay, and ownership in the open, on one shared model — eight modules I defined, running a radically transparent company with no management layer.

Technical Lead — UX / Product Design · PTC Inc. · PTC University

Mar 2014 – Dec 2019

First design hire at PTC University India; built and led a 4-person, distributed Customer Experience team – Pune

- Consolidated five standalone learning products into one platform (Learning Connector): **550k+ registered, 350k+ active learners** across 80+ countries — NASA, Boeing, Toyota, Airbus, Apple among the clientele.
- Design-led the shift from perpetual licenses to subscription: **0% → 64% of new bookings** in five quarters (Q3 2017 → Q3 2018).
- Replaced printed guidebooks with digital: **\$1M saved every year**. Mobile usage 4% → 38%; locales 9 → 11.

Designer + Front-End Developer · Equal Experts · for Telefónica O2 UK

Dec 2012 – Mar 2014

- Designed and hand-coded reward and offer screens for O2's **MyO2 (4M+ users)** and the Priority Moments loyalty programme — 2.6M sign-ups in year one, 5★ App Store. (Launch figures are O2's public numbers; I joined the programme in 2013.)

Systems Analyst — Mobility · Tata Consultancy Services

Sep 2010 – Dec 2012

- Built mobile solutions for Fortune 500 clients in banking and pharmaceuticals.

Intern · Nokia Networks

May – Jun 2009

The pattern library — shipped, not speculative

One rule (**Act / Review / Ignore** — for scores and agent actions alike) + eight patterns, all in production: Confidence Scores · AI Failure States · ML Explainability · Human-in-the-Loop · Provenance & Citations · The Capability Contract · Calibration & Track Record · Reversibility / Safe-to-Act. Documented with live demos at arpitmaheshwari.com/patterns.

Skills & tools

AI / ML product design — LLM & agentic interfaces, prompt & eval design, human-in-the-loop workflows, confidence & explainability UX, AI failure states, provenance & citations, evaluation-aware design, latency & cost trade-offs, AI-assisted prototyping in working code

Product design — UX strategy, interaction design, design systems, information architecture, user research, A/B testing & experimentation, usability testing, prototyping, data visualization, accessibility (WCAG)

Product management — product definition & scoping, roadmapping & prioritization, MVP definition, product strategy & outcome metrics

Leadership & delivery — Design leadership, cross-functional agile, stakeholder alignment, service design, 0→1 and 1→n product scaling

Tools — Figma, Adobe XD, Illustrator, Balsamiq, Claude, Antigravity, HTML5 / CSS3, SEO, CMS

Education

Executive MBA, Business Analytics · Institute of Management Technology, Ghaziabad · 2017–2018

B.E., Electronics & Communication · Shri Vaishnav Institute of Technology and Science, Indore · 2006–2010
