Professional Summary

Product manager who ships the interface as well as the spec. Sixteen years on data-heavy enterprise software, the last six owning definition, roadmap and UX for AI products where the model was right and adoption was the problem. I set the launch bar, every answer carries its source or says it cannot, design the human-in-the-loop, and code the front-end.

Highlights

- Five years on one connected advertising platform for the UK's largest out-of-home agency, six systems under one design system; platform bookings rose from under 5% to **100% of UK bookings** (client's public record).
- Every AI answer ships with its source or an honest abstention: private-equity deal screening **60% faster**, measured before and after rollout, with a source behind every score.
- Moved PTC University from perpetual licences to subscription, **0% to 64%** of new bookings in five quarters, as its first design hire and product owner leading a **4-person** team.

Professional Experience

Solution Consultant · Sahaj AI (product & design lead on client AI teams)

Dec 2019 – Present

Product and design owner for B2B AI platforms in advertising technology, private equity, venture capital and HR software, embedded in client teams: product definition, roadmap, end-to-end UX and the shipped front-end. Five years on one platform in a 50+ distributed team.

- Rebuilt **Talon Outdoor**, the UK's largest out-of-home agency (£400M revenue), from phone calls and spreadsheets into the market's aggregator: six connected systems under one **design system** I introduced. Platform bookings rose from under 5% to **100% of UK bookings** (client's public record).
- Adoption, not accuracy, was the bottleneck: the model already beat the traders, who overrode it anyway. Shipped every recommendation as an editable plan with its reasoning and KPIs attached. Planning fell from **two weeks to three hours**; **£69,000** media-value gain per client against trader baselines.
- Held a deal-screening release until the model could cite or abstain: a source behind every score, a named failure mode instead of a guess. Screening went **60% faster**, measured before and after rollout; lead analysts now open the deal memo with it.
- No verdict without a chain of evidence: a due-diligence tool that turns **16 analysis dimensions** into confidence-rated findings a partner must open before signing. Diligence fell from **three weeks to four days** across VC and PE engagements.
- Designed **OrgOS**, eight modules that let **200 people** (250 today) run staffing, pay and ownership in the open; zero managers in the loop since launch. Also shipped **PlanIt**, a consumer app, zero to launch in six months (1,000 monthly visitors, 250 active users).

Product & Design Lead · PTC Inc., PTC University

Mar 2014 – Dec 2019

First design hire at PTC University India and its product owner in practice: product definition, the quarterly release roadmap (2016–2019), consolidation and sunsets. Built and led the **4-person** customer-experience team.

- Consolidated five independent learning products into one platform. Usability testing showed customers called everything PTC University and never used our product names, so I unified under that name, migrating **150k learners** in 24 months; **550k+** registered learners in 20+ countries (NASA, Boeing, Toyota, Airbus and Apple among them).
- Moved the business model through the product: designed a free-to-premium funnel where free tutorials converted learners to paid plans; subscription went from **0% to 64%** of new bookings in five quarters (Q3 2017 to Q3 2018).
- Removed **$1M a year** in print costs against the 2016 print budget by replacing printed guidebooks with responsive content; mobile grew from 4% of sessions into a real channel, locales from 9 to 11.

Designer and Front-End Developer · Equal Experts, for Telefónica O2 UK

Dec 2012 – Mar 2014

- Co-designed and hand-coded the front-end of reward and offer screens for **4M+** MyO2 users; made the legacy app responsive across iOS, Android, Windows Phone and web. 2.6M Priority Moments sign-ups in year one, 5-star App Store rating (O2's public record; I joined in 2013).

Systems Analyst, Mobility · Tata Consultancy Services

Sep 2010 – Dec 2012

Mobile products for Fortune 500 banking and pharmaceutical clients.

Skills

Product management — product strategy, product definition, roadmapping, requirements (PRDs), prioritisation, stakeholder management, cross-functional leadership, agile delivery, A/B testing, product analytics, product-led growth, B2B SaaS, enterprise software

AI product design — LLM and agentic product UX, human-in-the-loop workflows and agent autonomy, evaluation bar and failure modes, explainability and confidence display, provenance and citations, abstention design, prompt and context design, AI agent governance and oversight

Product design — UX design, interaction design, visual design, design systems, information architecture, user research, usability testing, journey mapping, service blueprints, prototyping, accessibility (WCAG 2.1 AA), Lean UX, data visualisation, Figma

Engineering & domains — HTML5, CSS3, JavaScript shipped to production, daily AI coding tools (Claude Code), automated quality checks and a test suite on my own site; advertising technology, private equity, venture capital, banking, pharma, EdTech, telecom, HR software
